

# 1st Monthly project

- Clothing
  - light brown clothing to be camouflaged (avoid being attacked by sunworms and bandits)
  - people have developed tough skin to protect them from serious ultraviolet radiations and **what**

*v.s.*

- on the earth everyone wear different clothing up to the season but on this planet because the temperature is so high they only wear one kind of robe.
- people need to wear suntan lotion to avoid being sunburned.

- Food
  - loft-dried food that can be stored easily in the desert
  - they eat lizards, scorpions, and a variety of cactus grown easily in the desert
  - sandworms' flesh is pretty delicious but hard to catch them

*v.s.*

- on the earth we can eat different food grown under different weathers, for example we can eat wheat grown in Northern areas and rice grown in Southern areas
  - we now have electricity and the refrigerator to store the food but residents on the planet still haven't develop this technology so they can only eat dried food.
- Festivals :
    - the most important is the day of Vita

- 18th day of the 9th moon which is said the birthday of Dominuserti in the myths
- women dance around quicksand pits and throw in offerings
- some people hunt the largest sandworms in the desert in order to show their bravery
- dinner feast: sandworm big meal and attend national dancing part to sacrifice for the Dominuserti
- they throw fruit, precious metal and the bodies of gaint sandworms into a particular pit full of quicksand to please him.
- the next 9 days are called “the Days of Birth”
  - the outer residents that lives outside the perimeter of the oases can enter the oases at will
  - people don’t work and treat each other like brothers and sisters and express the thanks to Dominuserti

*v.s.*

- On the earth we usually have the religious festivals such as the Christmas and festivals to honor our ancestors, for example the ChingMing Festival to honor Qu Yuan. On the planet, the residents also have this tradition to thank the god Dominuserti.
- Sports:
  - the Race of the Sun - a tournament takes place twice a year both at solar noon and race a lap around the equator
    - the competitors need to drive a lap around the equator
    - the first one was held when the planet reaches its east perihelion
    - the second was held when the full moon rises 3 months later
    - the top 100 can go a live in the oases

*v.s.*

- shk和xjh这个靠你两了，我没什么想法（（
- Religions:
  - Dominuserti (which means the lord of the deserts)
    - he appears in the hottest and roughest places on the planet
    - he appears from time to time and saves thirsty and desperate people with oases and polishes off eildoers with sandstorms, quicksand and mirages
  - Judas
    - according to the earliest legends, Dominuserti defeated Titan Sandworm Judas.
    - his carcass turned into this planet, his blood turned to the deserts and his hair into smaller sandworms.
    - In order to create life, Dominuserti sprinkled drops of his blood on the deserts to create the oases.

*v.s.*

- On the earth we have many different religions because people live in different environments. However, since the conditions on this planet is the same - desert, people create such a religion to express their hope to defeat the nature disasters and difficulties.
- Building styles:
  - the building is 2 ft under ground to avoid too much ultraviolet radiations and high temperature
  - they usually use a kind of bricks that baked from a mixture of mud and sand to strengthen the intensity of the digged-down holes
    - binds unstable sand and fixes the hole's shape
  - inside the oases they also use a similar mixture to fix the shape of sand sculptures of Dominuserti

*v.s.*

- on the earth we use wood and stone to build the buildings at early times but it's impossible for most people who live in the desert because there is no tree or rocks but only sand. What's more, on the earth people usually use mable stone to shape the sculptures.
