INVISIBLE HAND

A metaphor for the unseen forces that move the free market economy.

Through individual self-interest and freedom of production and consumption, the best interest of society, as a whole, are fulfilled. The constant interplay of individual pressures on market supply and demand causes the natural movement of prices and the flow of trade.

Smith believed that the division of labor was a key driver of economic growth. By breaking down tasks into smaller, more specialized tasks, individuals could become more efficient and productive.
